INTRODUCTION

The NASA Thesaurus contains the authorized subject terms by which the documents in the NASA scientific and technical information system are indexed and retrieved. The NASA Thesaurus comprises two volumes - Volume 1 - Alphabetical Listing and Volume 2 - Access Vocabulary. The Alphabetical Listing contains all subject terms (postable and nonpostable) currently approved for use. The Listing includes terms appearing in the NASA Thesaurus, Preliminary Edition (December 1967) and the NASA Thesaurus Alphabetical Update (September 1971), and other terms approved through May 31, 1975. The Listing contains 15,060 postable terms and 3,343 nonpostable terms. The Access Vocabulary contains postable terms, nonpostable terms, pseudoterms, and other entry terms to provide multiple access to the NASA Thesaurus terminology. The Access Vocabulary contains 35,801 entry terms.

The terminology of the NASA Thesaurus is based in large part on the actual indexing vocabulary developed by NASA during the sixties. Other thesauri, notably the DOD Thesaurus of Engineering and Scientific Terms, (AD-672000), have provided additional candidate terms. The general guidelines in creating and maintaining the NASA Thesaurus have been based on the COSATI Guidelines for the Development of Information Retrieval Thesauri (1 September 1967).

The NASA Thesaurus is updated periodically and perhaps reissued biennially. The optimal revision of the Thesaurus terms and cross references will, however, require the cooperation and input of users of the Thesaurus and of the NASA scientific and technical information system Suggestions for term modification, deletion, and addition should be addressed to National Aeronautics and Space Administration, Scientific and Technical Information Office, Code KSB, Washington, D.C. 20546.

DEFINITIONS and CONVENTIONS

The definitions and conventions employed in the NASA Thesaurus follow.

Postable terms. Subject terms that have been approved for use in indexing and retrieval, and thus, can be "posted."

Nonpostable terms. Subject terms that are included for cross-reference information and cannot be used for indexing or retrieval. The terms are also called "Use references" which are mentioned in the section on Cross-Reference Structure (page vi).

Term Selection. Subject terms have been chosen on the basis of their significance and use in aerospace literature and their effectiveness in incorporating productive retrieval concepts. Particular consideration has been given to frequency of use in earlier NASA indexing and search vocabularies, to relationships with other terms in the vocabulary, and to precise scientific and technical usage

Grammatical Form. Subject terms are presented in the noun form Expressions that were presented in earlier vocabularies as adjectives or verbs have been converted to the noun form.

Singular vs. Plural. The plural form has in general been used for subject terms. The singular form, however, is occasionally employed for specific processes, properties, conditions, and hardware.

Effort has been made to minimize the use of punctuation within Punctuation. subject terms Where it is used, however, it becomes an integral part of the term.

Term Length No more than 42 characters, including spaces, are used for any subject term

Term Ambiguity. When subject terms have more than one meaning in aerospace usage, or where distinction between terms must be made, clarification is provided in one of two ways

a) Parenthetical qualifying expressions are added, becoming part of the subject term. For example.

SIZING (SHAPING) SIZING (SURFACE TREATMENT)

b) Parenthetical scope notes are also added for explanation or definition; they do not become part of the subject term. For example

SPECTROSCOPIC ANALYSIS (USE OF SPECTROSCOPIC TOOLS IN CHEMICAL ANALYSIS)

Direct Entry Subject terms that consist of more than one word are listed for direct entry, i.e., in their natural word order rather than in the inverted form. For example

ANALYTICAL CHEMISTRY, not CHEMISTRY, ANALYTICAL

Abbreviations and Acronyms. Abbreviations and acronyms that are in common use in the aerospace community are employed in this Thesaurus In most cases USE cross references are made from the unabbreviated forms. For example

> ORBITING SOLAR OBSERVATORY USE OSO

Synonyms. When candidate subject terms are true synonyms, one is chosen to be the valid, or postable, term, and the other is provided with a USE cross reference. For example.

> **COLUM BIUM** USE NIOBIUM

Array Terms Subject terms with meaning either too broad or ambiguous for effective indexing or retrieval of information, have been designated array terms and carry the following scope note (USE OF A MORE SPECIFIC TERM IS RECOMMENDED--CONSULT THE TERMS LISTED BELOW) Relationships with other postable terms are shown by the Related Term (RT) reference only. For example

BEAMS

SN (USE OF A MORE SPECIFIC TERM IS RECOMMENDED -- CONSULT THE TERMS LISTED BELOW) RT BEAMS (RADIATION) BEAMS (SUPPORTS)

An infinity symbol ∞ precedes an array term in each of its appearances in Volume I.

Identifiers In the NASA Thesaurus identifiers, i.e., subject terms that include a numerical or alphabetical designation, or both, for a specific model or item, are treated as regular subject terms and are provided complete cross references. For example

F-111 AIRCRAFT

UF LASV
TFX AIRCRAFT
GS ATTACK AIRCRAFT
FIGHTER AIRCRAFT
GENERAL DYNAMICS AIRCRAFT
.F-111 AIRCRAFT
GRUMMAN AIRCRAFT
JET AIRCRAFT
JET AIRCRAFT
TURBOFAN AIRCRAFT
F-111 AIRCRAFT
SUPERSONIC AIRCRAFT
F-111 AIRCRAFT
RT VARIABLF SWEEP WINGS

CROSS-REFERENCE STRUCTURE

Cross-reference relationships in the Alphabetical Listing are shown as follows

Cross references	Notation
Broader term	GS
Narrower term	GS
Related term	RT
Use	USE
Used For	UF

These cross references have the following applications

Broader Term This reference indicates that the term represents more inclusive concepts. In the Generic Structuring (GS), the Broader Terms appear above and to the left of the term referenced. For example

GS TELECOMMUNICATION
SPACE COMMUNICATION
SPACECRAFT COMMUNICATION
REENTRY COMMUNICATION

TELECOMMUNICATION, SPACE COMMUNICATION, and SPACECRAFT COMMUNICATION are Broader Terms to REENTRY COMMUNICATION.

Narrower Term. This reference indicates that the term represents more specific concepts. In the Generic Structuring (GS), the Narrower Terms appear below and to the right (indented) of the term referenced. For example

GS TELECOMMUNICATION
SPACE COMMUNICATION
SPACECRAFT COMMUNICATION
REENTRY COMMUNICATION

SPACE COMMUNICATION, SPACECRAFT COMMUNICATION and RE-ENTRY COMMUNICATION are Narrower Terms to TELECOMMUNICA-TION.

The Generic Structuring (GS) is complete for all terms and shows all relationships to generically related terms. In the example for Broader Term and Narrower Term, it is apparent that the term SPACE COMMUNICATION is a Narrower Term to TELECOMMUNICATION and is a Broader Term to SPACECRAFT COMMUNICATION and REENTRY COMMUNICATION.

Related Term (RT) This indicates that the two indexable terms are closely related conceptually but are not structured within the broader or narrower "tree," or hierarchy The reciprocal of the RT reference "a" is the RT reference "b" and vice versa

(a)RADAR EQUIPMENT
RT RADIO EQUIPMENT
(b) RADIO EQUIPMENT
RT RADAR EQUIPMENT

Use (USE) This indicates that the term is not "postable," i.e., not a valid term, and that the following term or terms should be used instead. For example

COLUMBIUM USE NIOBIUM

Used For (UF) This is a reciprocal of the USE cross reference and identifies valid, or "postable," terms For example

NIOBIUM UF COLUMBIUM

ALPHABETIZATION

The ordering of subject terms into an alphabetical arrangement can be accomplished in several ways. The most commonly used methods are the letter-by-letter, word-by-word, and the computer sorting order. In the absence of any universal agreement on a standardized approach, a word-oriented modification of the computer sorting technique has been adopted in this *Thesaurus* as the most useful and economic for this purpose.

NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

TECHNICAL REPORTS: Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

TECHNICAL NOTES. Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

TECHNICAL MEMORANDUMS:

Information receiving limited distribution because of preliminary data, security classification, or other reasons. Also includes conference proceedings with either limited or unlimited distribution.

CONTRACTOR REPORTS Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge

TECHNICAL TRANSLATIONS: Information published in a foreign language considered to merit NASA distribution in English

SPECIAL PUBLICATIONS Information derived from or of value to NASA activities. Publications include final reports of major projects, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

TECHNOLOGY UTILIZATION

PUBLICATIONS: Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Technology Surveys.

Details on the availability of these publications may be obtained from:
